Will We Finally Reach Consensus?
Discussions on COP21, the 2015 Paris Climate Conference

Thompson Library, Room 165
Wednesday, December 2, 2015 - 4:30PM to 6:00PM

Why Is Consensus Important?

As the world continues to experience the impacts of climate change, there is a growing call for international consensus on specific actions to keep temperature increases below 2 degrees Celsius. There is overwhelming scientific agreement that greenhouse gas emissions are the cause of climate change, and in recent years, many prominent faith communities have voiced the need to protect the world’s most vulnerable populations – who coincidentally have contributing least to climate change but will bear the brunt of its impacts. This event will explore international law and the political complexities of the negotiations. In addition, the panelists will comment on the role of science and religion in bringing about actions.
